

"IPX-301" 2W & 4W INTERFACE

The **IPX-301 Interface** allows the user to easily connect a 4W or 2W partyline intercom to an **IPCom** system. This unit is a great tool, as it makes any ALT AIR partyline station (wireless or wired) compatible with IPCom system but also makes it easy to connect IPCom systems to CCU's, which is crucial for broadcast facilities. Furthermore, **IPX-301** can also solve compatibility issues with WALKIE-TALKIE systems.

In the diagram below you'll find an example of an IPCom network, with the **IPX-301** interface use to connect some studio cameras (CCU) as well to connect an ALT AIR wireless system.
