

Intensity Pro 4K

Incredible quality capture and playback in SD, HD and Ultra HD for your HDMI, YUV, S-Video and NTSC/PAL devices!

Introducing the new Intensity Pro 4K, the easiest and highest quality way to capture video on your computer! Intensity Pro 4K has all the same great features of the original Intensity Pro capture card but now you also get Ultra HD and 1080p60 high frame rate support! Now you can capture Ultra HD images at up to 30 frames per second or 1080HD at an incredible 60

frames per second! You can save files with or without compression and use it with the most popular Mac and Windows video software. Intensity Pro 4K also includes DaVinci Resolve so you get a full capture and playback solution along with professional video editing and color grading, without having to buy any extra software!

Connect and Capture from Anything

Edit and stream video, capture gameplay or convert old tapes!

Whether you're editing video and you need a realtime preview on a big screen TV, if you're a hardcore gamer creating high frame rate walk throughs of your latest gameplay, or you're trying to save family videos from old VHS tapes, Intensity Pro 4K has all the video connections and features you need! Intensity Pro 4K includes both analog and digital connections that let you easily plug in everything from older VHS decks to the latest big screen 4K televisions! You can even connect your cameras and use Intensity Pro 4K for live streaming, video conferencing, presentations and more!

Highest Quality Connections

Connect to all of your SD, HD and Ultra HD devices!

Intensity Pro 4K features the highest quality HDMI and analog connections so you always get the best looking video possible. Intensity Pro 4K includes HDMI connectors for working with the latest HD and Ultra HD equipment, as well as analog YUV, S-Video, and NTSC/PAL connections for working with older analog televisions, videotape players and more. That means Intensity Pro 4K works with everything from your old VHS decks and DVD players all the way up to the latest gaming consoles and big screen Ultra HD televisions!

ULTRA HD
3840 x 2160

1080 HD 1920 x 1080

720p HD 1280 x 720

PAL SD 720 x 576

NTSC SD 720 x 480

1080p 60fps

1080p 30fps

Archive Old Tapes and DVDs

Preserve your most valuable video forever!

Rescue your old VHS, BetaMax video tapes and DVDs by making digital archives with Intensity Pro 4K! If your DVDs get scratched or your old tapes deteriorate and break you could lose important video memories forever. And as tapes get older, it's harder and harder to find working decks to play them back! Intensity Pro 4K captures better looking video than other solutions because it includes a professional, broadcast grade time base corrector to help stabilize video from poor quality tapes, like VHS and older DVDs. You can even adjust the audio and video levels before you capture so that your video looks as good as possible. Files can be saved as either uncompressed or compressed video so your valuable video is preserved forever!

Simply Better Quality
Broadcast quality components
for broadcast quality video!

Intensity Pro 4K is the only consumer video capture and playback card that's built using the same broadcast quality video components that professionals in the film and television industry use! Files can be saved in professional compressed formats, like ProRes and DNxHD, or as fully uncompressed 10-bit video, the format used by

10 Bit Color Depth Smooth color gradient.

8 Bit Color Depth Visible steps in gradient.

professional television production studios. That means you always get the highest quality video and the best color precision possible when working with the latest Ultra HD televisions and projectors, gaming consoles, set top boxes, consumer cameras, VHS decks, DVD players, older broadcast decks and more!

Works With Everything
Use the video software you know and love.

Intensity Pro 4K is a PCIe card for Mac, Windows, and Linux computers. It includes the easy to use Media Express software for Mac, Windows and Linux, along with DaVinci Resolve for Mac and Windows. That means you get a complete video capture and post production solution in the box without having to buy any additional software! You can also save files in QuickTime or Windows Media format and then use them with other popular Mac and Windows applications like Final Cut Pro X, Premiere Pro, Vegas Pro, Media Composer, Fusion, After Effects, Flash and many more.

Final Cut Pro X
