

CynerG2

Premiere Dual-Channel HD/SD Standalone Broadcast Graphics System for Your Complete Production Needs

Dual Channel System in HD-SDI and SD-SDI

Compix CynerG2 is the premium broadcast quality solution for your real time graphics needs. Upgrade to the CynerG2 system and make it perfect for any environment working in HD and SD-SDI, all with stunning output quality. The CynerG2 provides you with easy-to-use broadcast quality graphics you need today which can be an elegant upgrade for your future CG needs.

Twice the Power, Not Twice the Price

Dual channel CynerG2 systems are all about giving you the power of two systems in one chassis for 40% less than the cost of two separate systems. Use the power of both channels to create multiple overlays with our built-in downstream keyers and add to the visual interest of your graphics output with over 260 built-in page-to-page transitions including fade, credit rolls, and crawls. Two completely different streams with separate look and feel can run from each channel. Apply lower thirds and full screens on the first channel and, with the included NewsScroll application, add ticker crawls, a logo, time, and temperature on the second channel.
