Discussion, Voting and Interpretation System

TL-VQ5600+TC-Q5600+BJ-Q5600/BJ-K5600 Discussion, Voting and Interpretation System offers a flushmount conference solution for microphone discussion, interactive voting, simultaneous interpretation, language distribution, video tracking and software control. Flush discussion unit allows the delegate to talk and request to talk. Handheld voting keypad and flush voting unit can be used for attendance, voting, election, evaluation and grading. Flush channel selection unit is available with 6 channels for the delegate to hear the selected channel through a personal headphone. Volume control buttons can be used to adjust the headphone volume level for comfortable listening. Flush loudspeaker can be added to meet the venue needs.
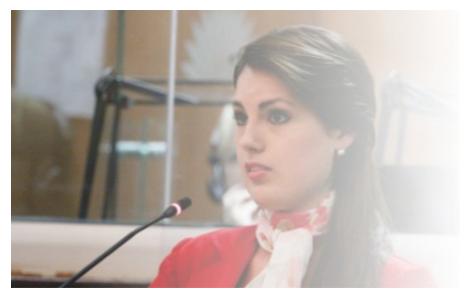

◆ **Flexible module-based solution**

Function modules can be stand-alone installed or easily combined to suit the venue environment and meet the customer needs, offering a versatile conference solution.

◆ **Smart voice activation mode**

The system can be operated under VOX (voice activation) mode so that the microphone is automatically turned on when the delegate speaks. VOX sensitivity can be adjusted to suit conference environment. This microphone mode enables hands-free operation with no need to push the microphone button.

◆ **Future-proof system expansion**

Built-in expansion port of the discussion module is designed for plug-and-play handheld module.It becomes easier to upgrade the system and extend more features w hen necessary in the future.
