

VL-4SE

PRODUCT DESCRIPTION

The VL-4Se is a fully simultaneous 4-channel charger, housed in a high-impact, polycarbonate enclosure with a recessed power switch and carrying handle. Quick and powerful charging make the VL-4Se the perfect choice for broadcast and production facilities with a high battery usage. Each channel is operated independently so batteries can be placed on charge in any order and at any time. (This VL-4Se is the successor of the VL-4S)
