Full HD resolution LCD panel with LED backlighting

The monitor features a 1920 x 1080 pixel full HD resolution LCD panel with LED backlighting. Compared to CCFL backlit monitors, LED backlit LCD monitors are more energy efficient, radiate little heat, and best of all, are free of mercury.

ITU-709 color space

The DT-V21G11 is compatible with ITU-709 standard color space for HDTV broadcasting.

Wide viewing angles with IPS panel

Selectable gamma preset modes: 2.2, 2.35, 2.45, and 2.6

Supports 3 time codes: LTC, VITC, & D-VITC

Built-in vector scope and waveform monitor

The vector scope is used for checking the input signal's hue and saturation. The displayed scope can be displayed in one of two sizes for ease of use. The waveform monitor detects the brightness of the input; its display position can be selected from one of four corners. Both displays can be made translucent or solid for simultaneous checking of the image and the scope/waveform.
