The Kessler CineSlider™ is an extremely heavy-duty and durable camera slider designed for the heaviest rigs while still remaining portable and lightweight. Reinforced aluminum, protected rails and precision machining combine to give filmmakers assurance that no matter what, the CineSlider will get the job done.

Heavy Duty

With an 80 lb. weight capacity the CineSlider holds more weight than any of our other sliders yet still remains extremely portable at a starting weight of 7.7 lbs. Add cameras, monitors, matte boxes, large lenses and more and still have weight to spare on the CineSlider.

Adjustable Drag Control

Everyone knows how important fluid drag controls are to tripod heads, so why not add the same idea to a slider? Now you can have that same ultra-smooth resistance to control your motion ensuring a perfect shot.

Removable Crank Handle

Depending on use and user, the removable crank handle on the CineSlider provides options for manual operation.

Motion Control Ready

The CineSlider is compatible for use with elektraDrive™, CineDrive™, and/or Second Shooter™ motion control systems. Adding a motion control system to your slider will increase precision in movement and provide a platform to capture professional time-lapse, stop-motion and live camera movement.

Lifetime Warranty

Backed by our manufacturer's Lifetime Warranty, we guarantee that it is free from defects in material and workmanship, otherwise we'll fix it.

Parallax

With the addition of the Parallax bar, easily add a panning axis to the slider.
