K-Touch

Cloud-Based System for Creating iOS & Android Room Control Applications

The K-Touch system allows the installer to easily integrate common touch devices as user interfaces in your Kramer-based room control system. By configuring the Kramer room controller to communicate over standard IT networks with your iOS or Android touch device, and designing the required control screen on the Cloud screen designer (no need to install it on your PC), a complete, advanced, touch-based room control system is at your fingertips.

FEATURES

- **Hundreds of Supported Mobile Devices** - K−Touch is supported on iOS and most common Android phones and tablets. With its easy−to−use free App available in the App Store and Google Play, K−Touch is your ultimate fits−all control solution.

- **Cloud Based System** - K−Touch Admin and K−Touch Builder are online cloud−based systems. Created user panels can be downloaded to their mobile device with the touch of a button, and can then be modified over the Internet at any given moment. To complete the change, re−sync the system.

- **Mix Hardware Panels and Touch Panels.**

- **K-Touch Master Controllers** - Our SL room control devices offer simple configuration and a host of control ports. They can be controlled either from our physical RC units or from a touch panel device, using the new K−Touch screen design system.

- **Available in Selected Regions** - Using and selling K−Touch licenses requires dedicated training. Ask your local Kramer office or distributor about course availability and training options.
