Live Streaming Production Studio

Quad HD Capture and ISO Recording Card for Telestream Wirecast

Create video streaming productions that are visually striking and grab your audience's attention. The combination of Matrox VS4 and Telestream Wirecast for Windows lets you switch or mix multiple live video feeds and pre-recorded clips while adding graphics and effects. This solution is ideal for internet broadcasts of sports, religious services, corporate meetings, and other live events. Tight integration of Matrox VS4 using the Wirecast input source SDK ensures the highest level of reliability and stability for your streaming productions.

Finally, online video streaming with the production values of live television broadcasts!

Capture up to four HD video streams

Matrox VS4 lets you take advantage of professional broadcast video and audio sources for the utmost quality in your internet productions.

In a single PCIe slot, Matrox VS4 provides up to four independent HD inputs with up to 8 embedded audio channels per source, taking up an absolute minimum of the precious real estate in your PC.

Full-size BNCs connect directly to your cameras.

Easy-to-use ISO recording

Recording all your video feeds is as important as streaming if post-event editing is required. Matrox VS4 not only sends your video feeds to Wirecast for streaming, it simultaneously records all your original video feeds to disk.

The easy-to-use Matrox ISO camera recording tool lets you record using the high-quality Matrox MPEG 2 I-Frame codec at up to 300Mb/s as well as DV, DVCPRO®, DVCPRO50 and DVCPRO HD® QuickTime files for use with popular editing apps from Adobe®, Apple® and Avid®.

Effortless onsite set-up

Just hook up your cameras, start Wirecast, and stream. Matrox VS4 automatically detects the presence, resolution, and frame rate of all your inputs so you don't have to manually set up each source in Wirecast.

Because all inputs on Matrox VS4 are independent, you can use HD and SD cameras in the same production.

Automatic

Expandable technology

Need more than four sources for your production? Simply add a second Matrox VS4 capture card to your system and you've increased your setup from 4 to 8 inputs.

Extensive audio support

Matrox VS4 captures up to 8 channels of embedded audio on each input. Using Wirecast, you can choose any stereo pair for your streaming production while simultaneously recording all 8 channels to disk using the Matrox recording tool. You have complete flexibility to go from a simple stereo mix to surround sound for your post-event editing needs.

Exceptional quality

You can expect excellence from Matrox Video Products Group. Our award-winning technology powers a full range of content creation and delivery platforms used by broadcasters, post-production facilities, project studios, corporate communicators and videographers worldwide.
