## BKS-2XM

The Portabrace Soft Backpack Camera Case (BKS-2XM) is a "flexible" carrying system that adapts to your changing equipment needs. From a simple DSLR camera and lens to a full rig with tripod and laptop, the BKS-2XM will keep your gear organized and protected.

The case's unique design expands in both length and depth to accommodate a wide range of equipment sizes.

Customize the interior divider kit again and again as your equipment needs change.

There's a tripod pocket and cinch on one side, a large storage pocket on the other, and a padded laptop pouch that can hold laptops up to 17".

Constructed using 1000-denier Cordura™ fabric, the BKS-2XM is both flexible and durable, ideal for travel and field work. The BKS-2XM meets most airline carry-on requirements.\*

\*always call ahead and check with the airline regarding their specific carry-on policy for your flight.
