Cabinet Speaker, MDF-Corpus, 15/6 W, 100 V

Rating: Not Rated Yet

Price:

[Question on item?](#)

Description This cabinet speaker is made of coated MDF wood and is due to its thought-out construction absolutely swinging- and boom-free. In connection with the broadband high performance chassis an excellent speech and music playback can be reached. The design is modern, decent and is commented upon in a positive manner by architects. The rear panel and the comfortable spring snatch lock make the assembly substantially easier.

Features

- The installed 100 V transformer enables the tapping to 1/1, 1/2 and 1/4 performance in each case.
- Drilled holes in the rear panel allow a horizontal or vertical attachment of the speakers.
- The models BCH-406 R/410 R are delivered with an installed volume control.
- The speakers are available in all RAL colours on request.
